

Vivianne Chappuis, Bern – Switzerland

I received my dental degree at the University of Zürich and completed my training in Oral Surgery, Stomatology and Implantology at the University of Bern in 2004. I am an Assistant Professor and an Oral Surgeon at the University of Bern since more than 15 years. During my research fellowship at the Harvard School of Dental Medicine from 2009-2011, I investigated the molecular basics of bone regeneration, funded by the prestigious Musculoskeletal Transplant Foundation.

I have been pursuing my translational research in the field of tissue regeneration, digital 3D computational imaging and esthetic implant rehabilitations. I have earned a Certificate of Advanced Studies in Entrepreneurship and as Business Economist in Change & New Business Management on the topic Medicine in the Digital Transition. In 2018, I was awarded with the André Schroeder Research Prize.

As an Oral Surgeon with broad experience in tissue regeneration, I am deeply involved in teaching, training, performing live surgeries, workshops and lectures in national and international courses and congresses. It is a great pleasure to empower young people and to provide them with the necessary tools for their clinical work.
