

FACTORS INFLUENCING SUCCESS IN MUCOGINGIVAL SURGERY

Giulio Rasperini (*Milano-Piacenza, I*)

Managing patient demands for highly esthetic and functional periodontal reconstructive outcomes is a major challenge in Dentistry.

Soft tissues deficiency can be corrected by the proper surgical technique combined with the use of the appropriate biomaterial in almost each clinical case.

Several techniques may be used to reach the final goal, and all of them should take in account the factors that influence the final outcome.

This presentation will be focused on the key factors that influence the success in mucogingival surgery.
